The Life jacket-Adapted Lj-A is designed for disabled people. It ensures a very high degree of stability. The body leans neither to the back or to the side and, even more important, the face always remains out of the water.

**Lj-A's gives the freedom to acquire autonomy.**

#### PFD-A's and Lj-A's The unique therapy tools

Designed from very high standards established by hospitals, PFD-A's and Lj-A's were first developed in rehabilitation centres to meet the needs of people having lost a certain degree of mobility and disability.

PFD-A's and Lj-A's meet the needs of a large clientele such as hydrotherapists, sports leisure, children and senior citizens. They have now become a reference in water safety in North America Rehabilitation Centers.

PFD-A and Lj-A resist involuntary reflexes and uncontrollable movements. PFD-A's and Lj-A's unique design stabilizes the body on the water. SiteWeb: see videos: <https://youtu.be/3n6lrqRFgF0>

They are great tools for therapy and rehabilitation. Specialized educators have, for the first time, a steady and safe support to dispense their care. Therapists can now extend their hydrotherapeutic care simultaneously to a greater number of individuals.

**Treatments gain in quality.**

The Personal Floatation Device-Adapted PFD-A's maintain the body stretched out in a dorsal position. They ensure greater stability in cases of morphological dysfunctions, involuntary sudden reflexes.

# PFD-A Horizontal

**They greatly increase users' confidence.**

**The PFD-A's flexibility and ergonomic design increases the overall comfort and stability on water.**

Available in sizes : for physically challenged

PFD-C	XX-Small	Infant	14 to 30 lb	6 to 14 kg
PFD-A	Small	child	30 to 40 lb	14 to 21 kg

## The right choice of Vest

This device is not a life jacket. Always use within reach of safety. CE standard is available.  
Is the future user able to place him/herself upright in water **without help**? If so, you should use one of the "Lj" models.
